

**We use only hard metal Heat/Air duct (no flex duct). Each joint is screwed together, sealed with duct butter and taped. Each duct is wrapped with R-8 insulation and taped. The insulated Heat/Air boots are glued to the sheetrock ceiling for maximum strength and no leakage.**

**Each engineered truss is hot glued on each side to the sheetrock ceiling (no nails to back out later)**

**All ceiling light fixture braces are metal and fastened to two trusses for maximum strength (no pop in boxes)**
