

Safeway Homes is the Pinnacle of Structural Integrity

- 1) 2" x 10" floor joist (each board is glued and fastened with screws)**
- 2) Floor system is treated with lifetime warranty "Perfect Barrier". This patented product guarantees against mold, mildew, termites or any infestation for the life of the home.**
- 3) 3/4" tongue and groove plywood is glued and fastened with screws to the floor system.**
- 4) 2" x 6" exterior studs and 2" x 4" studs are glued and fastened to the floor system with screws.**
- 5) We glue and fasten with screws the roof truss system to the wall system. Hurricane ties are also used at this point.**
- 5) 7/16" OSB is glued and fastened with screws to all eight sides of the home, from the bottom of the 2" x 10" floor joist to the top of the half trusses. This creates a structural box system that is rated at 160 mph.**
- 6) 1/2" sheetrock is hot glued to all studs (no nails to back out later).**
- 7) 45% more wood is used in the Safeway Home, over stick built construction.**
